01 — The Problem

Most small and mid-size agencies operate with **disconnected tools** — spreadsheets for clients, email for requests, WhatsApp for updates, and manual invoices. This creates chaos, missed revenue, and poor client experience.

Pain Point	Business Impact	How Common
No centralized client management	Lost leads, slow response	Very Common
Manual service request tracking	Errors, missed deadlines	Very Common
No subscription/billing system	Inconsistent monthly revenue	Common
Employee tasks not tracked	Zero accountability	Common
No real-time notifications	Poor client satisfaction	Very Common
Paper or WhatsApp-based chat	No audit trail, unprofessional	Very Common
No analytics or reports	Blind decision-making	Common

02 — LumiNex — The Solution

LumiNex replaces every disconnected tool with one unified platform — purpose-built for agencies offering digital services, consulting, design, or marketing.

Module	What It Does	Who Uses It
Admin Dashboard	KPI overview — revenue, requests, team performance	Admin
Client Portal	Submit requests, track progress, make payments	Client
Employee Panel	View tasks, update progress, add delivery notes	Employee
Service Catalogue	Browse all services by category with pricing	Client
Service Management	Admin CRUD for services, categories, documents	Admin
Subscription Plans	Tiered packages — Foundation, Growth, Launchpad	Client
Payment System	Record payments, view history, track status	Both
Request Tracker	Full lifecycle from PENDING to COMPLETED	All 3
Notification Bell	Real-time alerts across all roles	All 3
Client Management	Admin manages all registered clients	Admin
Employee Management	Admin adds/removes employees & sets designations	Admin
Revenue & Analytics	Revenue charts, payment summaries, trends	Admin

03 — Role-Based Architecture

LumiNex uses JWT-protected route guards to enforce strict role separation. Each role has its own dashboard, sidebar, and accessible modules.

ADMIN

- Full read/write access to all data
- Manage services, categories & packages
- View and update all service requests
- Add / remove employees & clients
- View revenue, payments & analytics
- Change Dynamic UI theme (proposed)
- Edit website content dynamically (proposed)

CLIENT

- Register with company & location details
- Browse service catalogue by category
- Submit service requests with notes
- Track request progress in real-time
- Make payments via multiple methods
- Choose subscription plans
- Download invoices (proposed)
- Chat with assigned employee (proposed)

EMPLOYEE

- View tasks assigned by admin
- Update task progress (0–100%)
- Add notes on task delivery
- View personal performance summary
- Kanban task board (proposed)
- Upload deliverable files (proposed)
- Chat with clients (proposed)

04 — Subscription Plans & Revenue Model

LumiNex supports tiered subscription plans for clients, plus per-service billing for one-off projects. Additional revenue streams are planned.

Plan	Monthly Price	Key Inclusions	Target Clients
Digital Foundation	\$499 / month	Website + Domain + Hosting + Email + Basic SEO + 3-mo Support	New businesses
Growth Accelerator	\$1,499 / month	E-Commerce Platform + 3-mo Marketing + Social Media + Branding	Growing SMEs
A-to-Z Launchpad	\$3,499 / month	Full setup + Trade License + Mobile App + 1-yr Marketing Strategy	Enterprise launch

Additional Revenue Streams

Stream	Model	Notes
Per-service billing	Fixed / Monthly	e.g. Logo design \$500 one-off, SEO \$300/mo
White-label SaaS licensing	Monthly SaaS fee	Sell LumiNex platform to other agencies
Premium support contracts	Retainer	Priority support & dedicated account manager
Marketplace commission	% per transaction	Future: freelancer marketplace on platform

05 — Recommended Feature Enhancements

The following features are recommended to transform LumiNex into a production-grade, fully competitive SaaS platform. Prioritized by business impact.

HIGH PRIORITY — Add First

#	Feature	Real Problem It Solves	How To Implement
1	Dynamic Theme Builder (Admin changes colors, logo, font from UI)	Admin can white-label the platform for each client's brand	Admin UI panel saves to /theme-settings in DB ThemeService applies CSS variables on app load
2	Admin: Add/Edit Services & Packages (No code required)	Non-technical admins can update pricing and offerings instantly	Extend existing service-management with image upload + rich text description editor
3	Admin: Add/Edit Subscription Packages (Drag & drop feature list builder)	Admin can create custom plans without developer help	New package-builder component with reactive form; saves to /subscriptions collection
4	Real Payment Gateway Integration (SSLCommerz + bKash API)	Currently payments are manual/mock — no actual money flows	Express.js backend SSLCommerz SDK payment verify webhook PATCH /payments with txnId
5	Admin-Editable Website Content (Hero text, images, about, contact)	Marketing team can update landing page without a developer	Admin 'Site Content' module saves to /site-content collection home.html reads dynamically

MEDIUM PRIORITY — Add in Phase 2

#	Feature	Real Problem It Solves	How To Implement
6	Invoice PDF Generation	Clients need professional invoices — currently no receipt system	jsPDF library in Angular; generate PDF from payment object; add download button in payments page
7	File Attachments on Requests (Client uploads briefs; Employee delivers files)	Currently no way to share files — clients use email or WhatsApp	Angular file input + FormData upload; Express multipart Cloudinary/S3; URL saved in service-request
8	Live Chat (Client to Employee)	WhatsApp-based communication is unprofessional and untracked	Socket.io on Express backend; Angular chat component in shared/; messages stored in /chat-messages

#	Feature	Real Problem It Solves	How To Implement
9	Kanban Task Board for Employees	Employees can't visualize their workload at a glance	Angular CDK DragDrop (already installed); columns = request statuses; PATCH on card drop
10	Real-Time Notifications via WebSocket	Current notifications are polling-based — not truly real-time	Socket.io emit on request status change; notification-bell subscribes to socket events
11	Employee Performance Dashboard	Admin has no data on employee productivity or completion rates	Aggregate service-requests by assignedTo; show completed count, avg time, rating in employee profile

LOWER PRIORITY — Scale Phase

#	Feature	Real Problem It Solves	How To Implement
1 2	AI Service Recommender	Clients don't know which service fits their needs	Based on businessType + request history; Claude/OpenAI API to suggest best package on catalogue page
1 3	Multi-Tenant / White-Label SaaS	LumiNex itself can be a product sold to other agencies	Add tenantId FK to all DB collections; subdomain routing in Express; per-tenant theme settings
1 4	Mobile App (Android & iOS)	Clients and employees need on-the-go access	Ionic + Capacitor wraps existing Angular code; minimal changes needed for app-store deployment
1 5	Advanced Analytics & Reporting	Admin needs forecasting, trends, and exportable reports	ng2-charts + D3.js for charts; CSV/PDF export via jsPDF; filter by date range, category, employee
1 6	Client Rating & Review System	No way to measure satisfaction or collect testimonials	Star rating widget on completed requests; ratings stored in /reviews; shown in employee summary
1 7	Automated Email Notifications	Critical updates (payment received, task done) rely on manual communication	NodeMailer on Express + email templates; trigger on key status changes
1 8	Two-Factor Authentication (2FA)	Security risk with plain password auth	TOTP via Google Authenticator; OTP field on login; QR code setup in profile settings

06 — Product Roadmap

Phase	Timeline	Features Delivered
Phase 1 — Foundation	Done	Auth (JWT + Guards), 3-Role Dashboard, Service Catalogue, Request Lifecycle, Payments (mock), Notifications, Subscriptions, Employee Tasks
Phase 2 — Dynamic UI	Month 1-2	Admin Theme Builder (colors, logo, font), Site Content Editor (hero, about, contact), Service/Package CRUD from UI, Image uploads for services
Phase 3 — Real Payments	Month 2-3	SSLCommerz + bKash API integration, Invoice PDF generation, Payment webhook verification, Transaction ID tracking, Payment receipt emails
Phase 4 — Collaboration	Month 3-4	Live chat (Socket.io), File attachments on requests, Kanban task board, Real-time WebSocket notifications, Employee performance dashboard
Phase 5 — Intelligence	Month 4-5	AI service recommender, Automated email alerts (NodeMailer), Client rating & review system, Advanced analytics with date filters
Phase 6 — Scale	Month 5-6	Multi-tenant/White-label SaaS, Mobile app (Ionic), 2FA security, CSV/PDF report exports, API rate limiting + caching

LumiNex — Built for real agencies, ready to scale.
